

# Waqt — Install & use guide

## Install the Android APK

- Open the ShafiAppCo Downloads page on your phone
- Tap Download Waqt APK
- If Android asks, allow installs from this browser, then install
- Open Waqt from your app drawer

## Set your location

Search for your city or use GPS. Prayer times and Qibla use that place and its timezone.

## Prayer times

Today shows the next prayer and the full day list. Prayers opens the month calendar with Hijri day numbers. Change method, madhab, and high-latitude rule in Settings.

## Qibla

Hold the phone flat. The arrow points to the Kaaba using true north (magnetic heading plus local declination).

## Adhan

In Settings, turn on Adhan at prayer time. Fajr uses the Madinah Fajr Adhan; other prayers use the regular Adhan. Audio plays while the app is open.

## Web

You can also use Waqt in the browser at <https://waqt.plain-capri.workers.dev>
